RT Pro UTV recommends this system be installed by a professional technician. In addition to these instructions, professional knowledge of disassembly/ reassembly procedures and post installation checks must be known.

---

**WHY BUY RT PRO UTV**

Great off-road driving and racing comes with having the most rugged and durable machine in the pack.

RT Pro UTV performance enhancing products will make your off-road machine stronger, tougher and safer so you can have more fun and less breakdowns.

For over a decade, RT Pro UTV staff have been taking brand new UTVs and driving them to their breaking point. When they bend, break or falter, we take them back to shop and create a fix that stops the problem from happening again.

There is no other company in the industry that puts more thought, engineering and design innovation into their products than we do. Our team is made up of off-road racers, mechanical engineers and talented fabricators who live and breathe all things motorsport. Above all, we share a passion for innovation, quality construction and getting things right.

All of our products are designed for assembly by weekend warriors with normal garage tools and the occasional spot-weld. Assembly directions are complete and thorough.

Remember, when you buy a RT Pro UTV product for your UTV, all of the parts have been designed and manufactured in the United States with U.S. steel and other high quality American components.

<b>RTP5701417</b>

Kit only works in non-turbo XP1000's  
Customer is responsible for re-routing stock air box, clutch ventilation lines, and taillights.

## SPECIAL TOOLS

None

## INSTALLATION TIME

Approximately 3 hours  
Moderate Difficulty

# INSTALLATION INSTRUCTIONS

1. Begin with a tear down of the rear of the vehicle, Removing the bed requires removal of the roll cage, rear fascia, and bed straps. You can leave the side plastics on the machine as you will fasten them to the bed delete side panels.
2. Coil Pack must be disconnected from bed straps and attached to the provided Coil pack mount. you then can install Coil pack mount as shown in figure 1

**Figure 1**

3. Install firewall panel and install lower stock hardware. see figure 2.

**Figure 2**

4. Install Driver and passenger mount brackets as shown in figure 3. They can be held in place by mounting to frame with provided hardware.

**Figure 3**

5. Install center support bracket. To install, use a male and female flange clamp around each side of the frame, and sandwich the center support mount and side mounts between the flange clamp. See figure 4 , 5 and 6. If you decide to run an aftermarket air intake, you can install it onto this support bracket before you add the paneling in the following steps.

**Figure 4**

**Figure 5**

**Figure 6**

- Set rear center panel in place, then install side panels onto the stepped edges of the rear center panel. you can then install the Dzus fasteners through both panels and into the side mount brackets. See figure 7.

**Figure 7**

**Figure 8**

- To fit side panels to stock plastic, hold plastic against side panel and trace holes for dzus fastners (3 Each side). Drill 7/16's holes into plastic and fasten plastic to side panels. See figure 9.

**Figure 9**

- Install top firewall panel and dzus fasteners. This step connects all the panels together. See figure 10.

**Figure 10**

- Once bed delete is installed, you can re-install roll cage.
